

Scientific Test Results

With great pleasure & pride we would like to share with you the laboratory test results for our Copper Infusers.

We arranged for scientific studies to ensure that Copper Infusers do, in fact, fetch you the vitality benefits that they were designed for. The tests were carried out by a laboratory for food & water testing, which conclusively prove that Copper Infusers make water naturally alkaline.

FORREST & LOVE COPPER INFUSERS

Tested for pH value using sampling method IS 3025 (P 11) RA 2017.
 Tests conducted at initial stage of 0 hours on still drinking water.
 Period of testing spanned over 12 hours.

| TEST CONDUCTED FOR | TEST PARAMETER | DURATION: 0 HOURS | DURATION: 4 HOURS | DURATION: 8 HOURS | DURATION: 12 HOURS |
|------------------------|----------------|-------------------|-------------------|-------------------|--------------------|
| COPPER INFUSER FEATHER | pH | 6.64 | 7.20 | 7.27 | 7.49 |
| COPPER INFUSER GINKGO | pH | 6.66 | 7.23 | 7.30 | 7.46 |

TEST SUMMARY

- ⌘ Tests conducted to analyse effect of Copper Infusers on the pH-value of still water.
- ⌘ The pH-value rises continuously over a period of 12 hours.
- ⌘ Test observations prove that Copper Infusers increase the pH level of water, thereby making it naturally alkaline (pH>7).

FURTHER NOTES

These tests help us conclusively prove that Copper Infusers can increase the alkalinity of water over a period of 12 hours. We, therefore, recommend using the infusers for 4 – 12 hours in still drinking water for maximum benefits.
